

RAIN – Radar Analytics Interface

Translating data for humans. RAIN empowers users with perfect visibility and clear visualization of data. It brings together different types of data and gives different perspectives on data. RAIN is the place where different feeds and different types of data are brought together.

Challenge Meets Solution

- Finding the needle in a haystack

- Working with huge data sets

- Time consuming and complex
- Extensive effort of processing data

- Difficulty of making sense of information

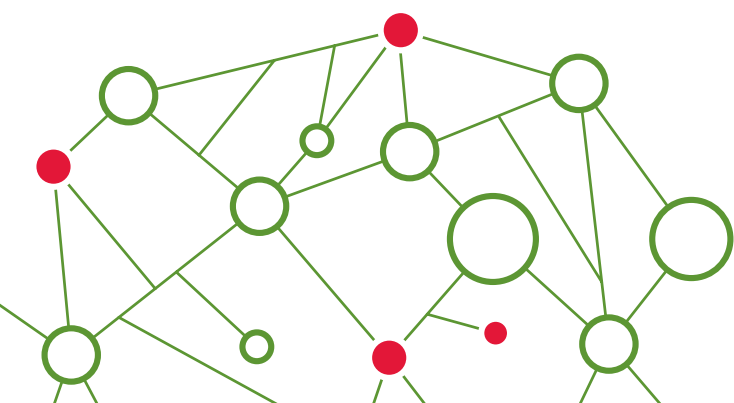

- Hunt for cyberthreats
- Support for Big Data Analytics
- Bringing things together – combining historical and live risk data
- Simplifying and reducing the administrative burden

- Putting things in context: visual presentation of data
- Flexibility in accessing data
- Seamless convergence
- Efficient orchestration
- Create powerful dashboards

RAIN In a Nutshell

- + Empowering humans to see the big picture
- + Expediting unparalleled threat hunting
- + Reducing complexities
- + Enhanced workflow functionalities
- + Visualization of data
- + Gaining meaningful insights
- + Putting data into a global context
- + Customizable interface
- + Freedom of perspective
- + Fully integrated into RadarServices stack

Translating data for humans.
